BAR CONTROLS

Do you think your bar could produce more profits from your existing sales...?

BEV-MET DISPENSING COLLAR

Detects liquid flow using tilt sensor technology.

Reports to a wireless receiver that sits seamlessly in your office.

Collar allows for half ounce, & full ounce pours. Software allows for line pouring of several shots consecutively.

Collar is protected against malicious removals using sensor that creates alert for operators.

Bev-Met delivers a cost effective technology for operators to profitably manage their entire inventory of liquor products. While our liquor guns and Wi-Pour spouts manage your high volume products, Bev-Met protects your top shelf and back bar products.

The wireless collar is available as through our Real Time Monitoring package where we interface not only to your PC but also to your Point of Sale (POS) system. Email and text message alerts draw your attention to profit issues.

Alternatively, we create usage files on your PC for manual reconciliation to sales figures from POS.
